

# HP Simply StorageWorks reference guide

Your guide to HP storage solutions for small and  
mid-sized businesses

Spring 2008 Edition

# Simply StorageWorks

When faced with growing volumes of data to store and protect, it can be a challenge to find a solution that is easy to set up and manage, and which is also reliable and affordable. HP Simply StorageWorks makes it easy to find the answer to your specific storage challenges with solutions that are grouped into three pillars:

**Simply Consolidation**, **Simply File Services**, and **Simply Business Protection**. Each of these pillars addresses a different business need and provides advice on what storage solutions best fit your environment.

**Simply Consolidation** brings greater efficiency and flexibility to growing business operations by making it easy for customers to centralize and share storage for multiple application servers. It keeps things simple with entry-level, plug-and-play solutions such as the All-in-One Storage System as well as storage area network (SAN) products that can be ordered with one part number such as SAN starter kits, which will be available in April/May 2008.

**Simply File Services** helps customers deliver and manage optimized file serving for their end-user clients that is designed to help improve business performance. It is simple, with Microsoft® Windows®-based file servers that are tuned to run up to 20 percent faster than build-it-yourself solutions. It features HP products designed specifically for file serving—HP ProLiant servers integrated with Microsoft Windows Storage Server software. Full index search capabilities help workers find data faster, and HP ProLiant Storage Servers and HP All-in-One Storage Systems are preconfigured to be deployed and managed in minutes, not hours.

**Simply Business Protection** helps customers keep their businesses running smoothly, with solutions ranging from backup to disaster recovery to long-term archiving. It is simple, with easy-to-use disk and tape-based backup and recovery products designed to fit the unique needs of small and mid-sized businesses. With a wide range of solutions designed just for them, your customers can select the right amount of capacity, whether it is 40 GB or 80 TB. They also have their choice of technologies—from tape drives and libraries to disk-based backup appliances to data backup software solutions.

# Simply Consolidation

Simply Consolidation provides simple advice on how to implement a SAN solution, giving you shared capacity for your application servers so that they deliver reliability and easier management.

A storage area network (SAN) provides resource sharing that is similar to a local area network (LAN), but is designed specifically for servers to share storage devices such as disk arrays and tape libraries.

HP has introduced SAN solutions based on the iSCSI protocol, which enables smaller IT environments to benefit from shared network storage at an achievable cost.

- The HP StorageWorks MSA2000i (iSCSI) and the MSA2000fc (Fibre Channel) are part of a new generation of storage arrays designed for entry-level customers that features the very latest in functionality and technology at highly affordable investment price points.
- The All-in-One Storage Systems provide affordable, easy-to-use, appliance-based, entry-level consolidation with the added functionality of file serving and integrated data protection.

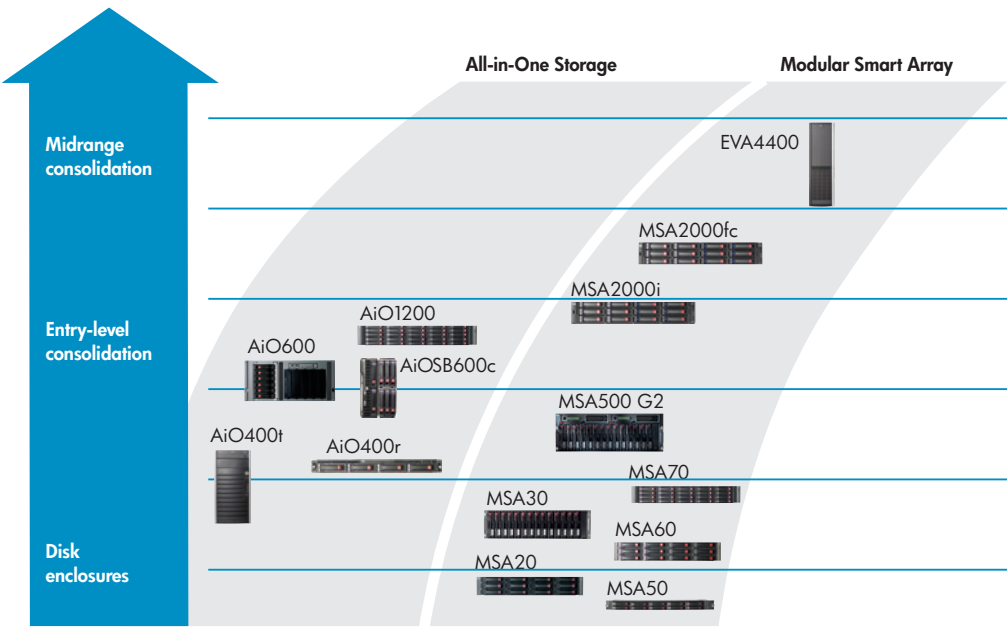

Both types of SANs enable growing amounts of data to be stored and managed more efficiently. Plus, they reduce operational and management costs and provide the following benefits:

- Online scalability—for the easy addition of extra storage
- High levels of availability—helping to ensure that data and applications are always fully accessible
- Simple and centralized management—saving vital human resources
- High utilization of disk capacity—enables improved cost-efficiency and rapid ROI
- Faster data restoration—allowing businesses to return to full productivity

# HP StorageWorks Modular Smart Arrays and All-in-One Storage Systems family

Affordable, scalable, and manageable high-performance storage consolidation solutions

For technical reference, go to quickspecs: [www.hp.com/products/quickspecs](http://www.hp.com/products/quickspecs)

# HP StorageWorks All-in-One Storage Systems family

HP StorageWorks All-in-One Storage Systems (AiO) are radically simple, integrated, and affordable network storage solutions that enable small and midsized companies to manage, grow, and protect their data easily.

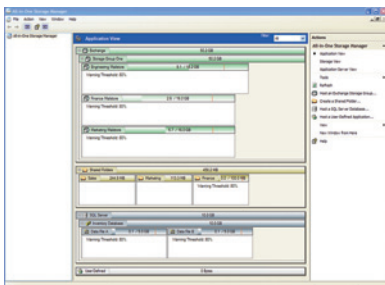

The HP StorageWorks 400t, 400r, 600, 1200, and SB600c All-in-One Storage Systems are unified storage devices that provide benefits from all three Simply StorageWorks pillars:

- **Simply Consolidation:** Integrated iSCSI array enables shared storage, which delivers more efficient use of capacity and lower operational costs.
- **Simply File Services:** Optimized file serving for end-user clients (NAS) to improve productivity and collaboration. These systems are performance tuned and improve capacity utilization by reducing duplicate files within shared volumes.
- **Simply Business Protection:** Integrated protection of iSCSI and NAS data while also enabling data protection of other servers and clients to deliver network backup consolidation when paired with HP tape products.

These fully integrated solutions are designed to be deployed by IT generalists and require no storage expertise. They offer everything you need to lower the cost and complexity associated with rapidly growing data environments.

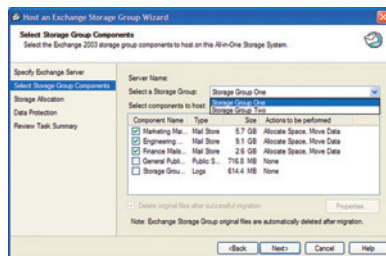

## All-in-One Storage Manager

A single interface that manages storage and data protection from an application-centric point of view.

## Setup and migration tools

IT generalists can set up storage quickly and easily and migrate data using "best-practice" wizards.

## Features and benefits

- **Breakthrough simplicity to lower the cost and complexity of data management:**  
HP All-in-One Storage Manager simplifies the growth, management, and protection of data by hiding complexity and reducing barriers to network storage.
- **Integrated and adaptive storage solutions to enable dynamic business growth:**  
These solutions provide utility and flexibility by combining multiple storage functions into a single integrated solution. They also allow storage to be a turnkey resource.
- **Affordable and cost-effective solution for growing application environments:**  
Managed through a single interface, they provide multiple storage functions that are lower than the cost of separate products and do not require you to change your infrastructure.
- **Application-centric storage management simplifies operation and lowers costs:**  
This management uses terms and functions familiar to application administrators and has data migration capabilities for key Microsoft applications. It includes iSCSI management for heterogeneous environments (Microsoft, Linux, VMware, etc.).

For more information, go to: [www.hp.com/go/AiOstorage](http://www.hp.com/go/AiOstorage)

# HP StorageWorks All-in-One Storage Systems

HP StorageWorks All-in-One (AiO) Storage Systems provide shared storage expansion for application servers (iSCSI SAN), enhanced file serving for end-user clients (NAS), and comprehensive data protection features.

**NEW:** StorageWorks 400t or 400r All-in-One Storage System (AiO400t or AiO400r)

Best suited for customers needing less than 1 TB total raw capacity.

StorageWorks 600 All-in-One Storage System (AiO600)

Best suited for customers looking for increased capacity, scalability, and hardware redundancy.

StorageWorks 1200 All-in-One Storage System (AiO1200)

Best suited for customers looking for increased performance and capacity from 12 internal drives and a high-performance RAID controller.

StorageWorks All-in-One SB600c Storage Blade Solution (AiO SB600c)

Best suited for customers looking for unified file serving and shared storage array features inside of BladeSystem c-Class environments.

## Technical specifications

### All-in-One Storage System family

<b>File-serving support</b>	SMB/CIFS, NFS, HTTP, FTP
<b>iSCSI host support</b>	Compliant with iSCSI industry standards and compatible with industry-standard iSCSI initiators; additional iSCSI interoperability has been verified for Windows 2000, Windows Server 2003, VMware ESX Server 3, SuSE Linux Enterprise Server 10, Red Hat Enterprise Linux 5, and QLogic 40xx
<b>Data protection features</b>	Hardware RAID, VSS Snapshots (512 per volume), HP Data Protector Express software, Microsoft DFS Replication, and optional HP Storage Mirroring replication
<b>Operating system</b>	Windows Storage Server 2003, Release 2 Standard Edition

# Ordering information for AiO400t/400r/600/1200/SB600c

## Ordering information AiO400t

## Ordering information AiO600

**AG538A** AiO600 1.5 TB SATA  
**AG543A** AiO600 3.0 TB SATA  
**AG549A** AiO600 876 GB SAS  
**AG727A** AiO600 1.8 TB SAS  
**AG546A** AiO Tower-to-Rack Conversion Kit

## Ordering information AiO1200

**AG655A** AiO1200 3 TB SATA  
**AG656A** AiO1200 6 TB SATA  
**AG657A** AiO1200 9 TB SATA  
**AG658A** AiO1200 1.7 TB SAS  
**AG659A** AiO1200 3.6 TB SAS

## Ordering information AiO SB600c

**AG780A** AiO SB600c 1 TB SAS Storage Blade Solution

## Optional software components

HP Storage Mirroring  
**T5321A** Storage Mirroring for All-in-One Storage

## Options to extend included Data Protector Express software

(Note: No options are required for basic backup and recovery of iSCSI LUNs or NAS file volumes.)

For the protection of networked Windows, Linux, and NetWare servers by backup to AiO storage pool:

- HP Data Protector Express Network Client Agent (**BB121AA**)—one per protected machine

For the protection of networked Microsoft Exchange servers while servers are online by backup to AiO storage pool:

- HP Data Protector Express Microsoft Exchange Online Backup Agent (**BB123AA**)—one per protected machine
- HP Data Protector and Express Network Client Agent (**BB121AA**)—one per protected machine

For protection of Microsoft SQL Servers while servers are online by backup to AiO storage pool:

- HP Data Protector Express Microsoft SQL Online Backup Agent (**BB124AA**)—one per protected machine
- HP Data Protector Express Network Client Agent (**BB121AA**)—one per protected machine

For automated disk-to-disk (AiO storage pool)-to-tape backup:

- HP Data Protector Express D2D2Any Option (**BB128AA**)

## Technical specifications

### AiO400t

**Processor** Dual-core Intel® Pentium® E2160  
1.8 GHz

**Memory** 2 GB/8 GB  
(std./max.)

**Storage controller** Smart Array E200 Controller  
with 128 MB Battery Backed  
Write Cache (BBWC)

**Internal storage** Four 3.5" (large form factor)  
non hot-pluggable drive bays  
(varies by model)

- 1 TB SATA model:  
four 250 GB 7.2k rpm  
SATA HDDs
- 584 GB SAS model:  
four 146 GB 15k rpm  
SAS HDDs

**Storage expansion** None

**Network controller**

- Embedded NC105i PCIe  
Gigabit Ethernet Server  
Adapter
- Additional NC360T Dual Port  
Gigabit Ethernet Server  
Adapter

**Form factor** Micro ATX tower

### AiO400r

Quad-core Intel® Xeon®  
E5405 2.00 GHz (one standard;  
up to two supported)

2 GB/32 GB

Smart Array E200 Controller  
with 128 MB with BBWC

Four 3.5" (large form factor)  
front load, hot-pluggable drive bays

- 1 TB SATA model: four 250 GB  
7.2k rpm SATA HDDs
- 2 TB SATA model: four 500 GB  
7.2k rpm SATA HDDs
- 1.2 TB SAS model: four 300 GB  
15k rpm HDDs

MSA50/60/70

• Embedded NC320i PCIe  
Dual Port Gigabit Ethernet Server  
Adapter

1U rack

### AiO600

Dual-core Intel® Xeon® 5150  
2.67 GHz  
One 4 MB L2 cache memory

1 GB/4 GB

Smart Array E200i Controller  
with 128 MB BBWC

Six 3.5" (large form factor) front  
load, hot-pluggable drive bays

- 1.5 SATA model:  
6 x 250 GB 7.2k rpm HDDs
- 3 TB SATA model  
6 x 500 GB 7.2k rpm HDDs
- 876 GB SAS model  
6 x 146 GB 7.2k rpm HDDs
- 1.8 TB SAS model  
6 x 300 GB 15k rpm HDDs

MSA20/30/50/60/70

• Embedded NC373i Multifunction  
Gigabit Network Adapter  
• Additional Dual-Port NC360T  
10/100/1000T

5U (tower or rack)

<b>Storage expansion</b>	None
<b>Network controller</b>	Two embedded NC373i Multifunction Gigabit Server Adapters with TCP/IP offload engine
<b>Form factor</b>	One half-height BladeSystem c-Class server blade and one half-height BladeSystem c-Class storage blade

# HP StorageWorks Modular Smart Array (MSA) family

The HP StorageWorks MSA family of enclosures delivers industry-leading availability, storage density, and upgradability to meet customers' demanding and growing storage needs.

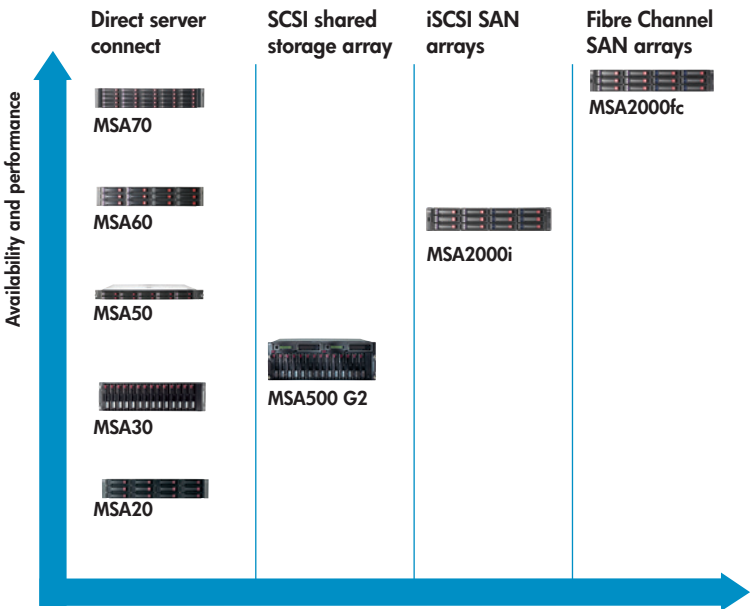

Ideal for entry-level businesses, departmental, and branch-office customers, MSA models range from low-cost SATA drive storage enclosure models to high-performance disk arrays, and all offer:

- High Availability standard with hot-pluggable and redundant power supplies and cooling fans

For more details about the MSA family, visit: [www.hp.com/go/msa2000](http://www.hp.com/go/msa2000)

For configuration tools, visit: [www.hp.com/go/nssizer](http://www.hp.com/go/nssizer)

For supported environments, server configurations and storage controllers, visit: [www.hp.com/products/quickspecs](http://www.hp.com/products/quickspecs) and click on Storage Products.

# HP StorageWorks MSA20 and MSA30

These external disk enclosures provide additional storage capacity for servers as well as for MSA SAN arrays. They eliminate the need to buy new servers when only additional storage is required, and their modular design enables expansion from a few disks to multiple terabytes.

HP StorageWorks MSA20

HP StorageWorks MSA30

## Key features and benefits

- **A common storage platform** that allows for future storage consolidation to a SAN
- **Hot-pluggable disk drives**, power supplies, and fans
- **Redundant fans** and redundant power supplies
- **Dual-power hot-pluggable supplies** that are sufficient to provide power to the enclosure and maintain normal operating levels
- **Environmental Monitoring Unit (EMU)** monitors environmental conditions within the enclosure and the components, such as the power supply and fans

## Technical specifications

	MSA20	MSA30	MSA30 MI
Total drive count	12 SATA	14 SCSI	14 SCSI
Drives used	3.5" LFF	3.5" LFF	3.5" LFF
Rack height	2U	3U	3U
Maximum storage	9 TB	4.2 TB	4.2 TB
Storage controller	SCSI Smart Array controller (server based)		
RAID	0, 1, 1+0, 5, 6 (ADG)		
OS Support	Windows Linux NetWare SCO	Windows Linux NetWare HP-UX OpenVMS	HP-UX OpenVMS

### Ordering information MSA20

- 335921-B21** HP StorageWorks MSA20 Enclosure  
Supported SATA 3.5" LFF Hard Disk Drives:

# HP StorageWorks MSA50, MSA60, and MSA70

These high-availability, high-performance, and high-capacity SAS disk enclosures support your existing and future storage needs.

HP StorageWorks MSA50

## Key features and benefits

- **Support for SAS AND SATA mix** in the same enclosure (MSA50 and MSA60 only), which delivers data-transfer rates of up to 3 Gb/s
- **Provides storage capacity** of up to 9 TB per enclosure
- **Multi-terabyte scalability** by cascading several enclosures  $(1 + 3) \times 12 = 48$  disk slots behind a single SAS controller port for a potential total capacity of 36 TB (MSA60 only)
- **A common storage platform** that allows for future storage consolidation to a SAN
- **SFF drives** allow increased air flow through the storage unit for better cooling and reliability
- **Hot-pluggable disk drives**, fans and power supplies
- **Easy removal of parts** provides better serviceability, with no tools required
- **Small Form Factor (SFF)** at 2.5 inches enables growth in space-constrained environments, lower power consumption, and higher I/O performance with more disk drives per unit space
- **Large Form Factor (LFF)** at 3.5 inches enables multi-terabyte capacity, high megabyte-per-second performance, and effective cost-per-gigabyte ratio

## Technical specifications

### HP StorageWorks MSA50

Total drive count	10 SAS/SATA
Drive form factor*	SFF
Rack height	1U
Maximum storage	1.4 TB (using 146 GB SAS SFF disk drives)
Storage controller	SAS Smart Array controller P600, P800, or E500 on server
RAID	0, 1, 1+0, 5, 6 (ADG)
OS support	Windows, Linux, NetWare

# HP StorageWorks MSA2000i

The HP MSA2000i is the iSCSI member of a new generation of storage arrays. It allows networked storage to be deployed on a familiar and cost-effective IP infrastructure. The MSA2000i is specifically designed for entry-level customers and features the very latest in functionality and technology at highly affordable investment price points.

## Key features and benefits

- **For entry-level IP SAN needs:** The MSA2000i is a low-cost, scalable storage consolidation system that utilizes Ethernet connectivity to build your SAN. It supports a choice of SAS drives for high-speed heavy duty work, and SATA drives for archival storage.
- **Simple management:** By utilizing the Ethernet protocol combined with the powerful but easy-to-use management, MSA2000i software makes it ideal for departmental and remotely located IP SANs. It features the latest in browser-based controller communication, so access is not restricted geographically.
- **Scalability:** With the addition of up to three drive enclosures, the MSA2000i can control up to 48 drives and scale capacity to over 14 TB of SAS or 36 TB of SATA.
- **Platform support:** The MSA2000i supports all HP ProLiant servers running Windows or Red Hat and SuSE Linux in single-server or clustered implementations.
- **High availability:** In addition to having redundant fans, power supplies, and other hot-pluggable components, the MSA2000i also provides controller-based snapshot and clone capabilities for increased data protection.
- **Complete solution:** All configuration, management, and partitioning and expansion capability comes as standard, without unexpected extra charges.

## Technical specifications

Total drive count	48 SAS or SATA drives (with additional enclosures)
Rack height	2U
Maximum storage	3.6 TB SAS scalable to 14.4 TB 9 TB SATA scalable to 36 TB
RAID	0, 1, 3, 5, 6, 10, 50

# The HP StorageWorks MSA2000fc

The HP MSA2000fc is the newest Fibre Channel addition to the Modular Smart Array family, bringing high-speed 4 Gb Fibre Channel to an array specifically designed for entry-level users. It features the very latest in functionality and a mature technology at highly affordable investment price points.

## Key features and benefits

- **Consolidated storage:** 4 Gb Fibre Channel technology provides high-speed access to data stored on enterprise-class SAS drives or SATA drives for inexpensive archiving. Its low cost and modular architecture make it ideal for users who need a storage solution that is able to start small and expand as their needs grow.
- **Scalability:** You can start with a single-controller array with space for 14 hard drives. You can then add a second controller and grow to 48 drives, increasing capacity to over 14 TB of SAS or 36 TB of SATA as your needs expand.
- **Simple management:** Powerful but easy-to-use management software makes it ideal for departmental and remote location SANs.
- **OS and server support:** The MSA2000fc supports all HP ProLiant servers, including server blades running Windows or Red Hat and SuSE Linux in standalone servers or clustered implementations.
- **High availability:** In addition to having redundant fans, power supplies, and other hot-pluggable components, the MSA2000fc also provides controller-based snapshot and clone capabilities for increased data protection.
- **Complete solution:** All configuration, management, and partitioning and expansion capability comes as standard, without unexpected extra charges.

## Technical specifications

Total drive count	48 SAS or SATA drives (with additional enclosures)
Rack height	2U
Maximum storage	3.6 TB SAS scalable to 14.4 TB 9 TB SATA scalable to 36 TB
RAID	0, 1, 3, 5, 6, 10, 50

# HP StorageWorks 8 Gb Simple SAN Connection product family

HP simplifies SANs by combining 8 Gb Fibre Channel performance with end-to-end SAN management in a solution capable of supporting emerging technologies at today's 4 Gb pricing. The HP StorageWorks 8 Gb Simple SAN Connection product family makes installing and managing your SAN easy.

## Key features and benefits

- **High performance at affordable pricing:** State-of-the-art 8 Gb Fibre Channel technology provides the bandwidth needed to support emerging technologies.
- **Enterprise-class features:** Powerful switch and HBA features help you get the most out of your SAN.
- **Integrated end-to-end management:** You can configure and monitor HP switches, HBAs, and storage from a convenient unified dashboard.
- **Ease of deployment:** You can eliminate the risk of expensive configuration errors with point-and-click wizards.
- **Aggressively priced bundle:** The 8 Gb Simple SAN Connection Kit includes everything required for a 4-host SAN infrastructure, including 8 Gb HBAs, cables, and SFPs—just add your choice of HP storage.
- **Scalability:** As your needs change, you can expand using four-port license keys that provide up to 20 ports per chassis, then link additional switches and HBAs to create a larger SAN of any topology.
- **Investment protection:** The 8 Gb Simple SAN Connection products are priced competitively with previous generation products.

### HP StorageWorks 81Q PCI-e Fibre Channel Host Bus Adaptor

### HP StorageWorks 8/20Q Fibre Channel Switch

## Technical specifications

### HP StorageWorks 8/20Q Fibre Channel Switch

Performance	8 Gb/s
Max. ports	20
Min. ports	8
Aggregate switch bandwidth	320 Gb/s
Form factor	1U

### HP StorageWorks 81Q PCI-e Fibre Channel HBA

Number of channels	Single
Port speed	8 Gb/s
Slot type supported	PCI Express to Fibre Channel
Servers supported	HP ProLiant ML and DL platforms

# HP StorageWorks 4400 Enterprise Virtual Array

The HP StorageWorks EVA4400 provides an enterprise-class virtual storage array that can be deployed easily at an affordable price for the midsized customer.

## Key features and benefits

- **Affordable enterprise-class storage array functionality:**  
The EVA4400 is easy to install, upgrade, and manage, at an affordable price for midsized customers.
- **Virtualization improves capacity and reduces management complexities:** Reduces complexities of installations by employing EVA virtualization capabilities to improve management resources.
- **Less time managing storage:** Installation is quick and easy, taking only a few hours. It's easy to upgrade, repair, and replace components without the need for a service call.
- **Lower cost of ownership:** Contributing to an attractive total cost of ownership, the EVA4400 is more affordable and less complex than traditional arrays.
- **Simplified integration of leading business applications:**  
EVA4400 Solution Blocks provide blueprints for integration with Microsoft Exchange, Oracle,<sup>®</sup> and SAP that combines the right server, storage, and application components for quick deployment of typical business projects.
- **Storage that keeps pace in the agile world of virtual servers:**  
In a dynamic VMware environment, the most complementary storage is one that can respond quickly to change. The EVA4400 makes it easy to configure and provision storage.
- **Complete solution for storage and servers:** Combined with HP BladeSystem, the EVA4400 provides a complete solution where storage and servers are managed together.
- **Easy and robust disaster recovery:** Local and remote replication software, HP StorageWorks Business Copy EVA and Continuous Access EVA, protect data, so in the event of a service disruption, recovery is quick and easy.
- **High availability for planned uptime:** High availability with a dual-redundant architecture of high-end arrays that supports robust local and remote replication capabilities.
- **8 Gb/s ready:** Embedded switch model includes two 8 Gb/s embedded 10-port B-series SAN switches, providing access to the industry's fastest-performing SAN infrastructure.

## Technical specifications

Total drive count	96 FC or FATA drives
Rack height	2U (2 controllers per enclosure)
Maximum storage	1 to 96 TB

# HP storage networking

As the worldwide leader in storage area networks (SANs), HP StorageWorks delivers flexible, open, standards-based storage networking solutions that are suitable for any business size.

HP's comprehensive family of SAN products and solutions is designed to meet a range of storage networking needs from small and medium-sized businesses to the largest enterprise businesses. HP StorageWorks SAN solutions deliver the scalability, performance, and broad functionality required for critical data and applications.

## Key features and benefits

- **Upgradeable:** investment protection through backwards compatibility with older-generation switches and ability to upgrade device firmware without disruption
- **Reduced complexity:** architectural guidance through the SAN Design Guide, solution-focused blueprints, and essential flexible SAN design and efficiency resources such as SAN Designer and SAN Visibility
- **High availability:** industry-leading availability levels through director-class products and redundant-fabric SAN topology designs
- **Secured:** authentication, authorization, access control, zoning, and data encryption provide added levels of network security
- **Open:** support for multiple operating systems and clustering environments; new standards-based fabric interoperability among B-series, M-series, and C-series for outstanding flexibility and investment protection; refer to SAN Design Guide for currently supported configurations
- **Scalable:** in distance, connectivity, and performance to enable both today's and tomorrow's connectivity needs
- **Multiprotocol:** ability to support multiprotocol infrastructures, including Fibre Channel, iSCSI, and Fibre Channel over IP (FCIP)

For detailed information, white papers, and other content on HP's approach and added value for the SAN infrastructure, see: [www.hp.com/go/san](http://www.hp.com/go/san)

For technical references, see the quickspecs: [www.hp.com/products/quickspecs](http://www.hp.com/products/quickspecs)

# HP StorageWorks SAN Design Guide

As the worldwide leader in SANs, HP StorageWorks delivers the flexible, open, standards-based storage infrastructure solutions suitable for any business size. This leadership is demonstrated and published in the HP StorageWorks SAN Design Guide.

HP continues driving simplicity in network storage by providing a completely new edition of the SAN Design Guide (SDG). The SDG provides customers with the benefit of HP engineering guidance, when building and designing scalable, highly available enterprise SANs. More specifically, it provides:

- Architecture guidance
- Massive configuration support
- Implementation best practices
- SAN rules for incorporating new multiprotocol technologies

For in-depth information about HP's qualified SAN architectures and best practices, consult the SAN Design Guide: [www.hp.com/go/sandesignguide](http://www.hp.com/go/sandesignguide)

# SAN Visibility and SAN Designer

SAN Visibility and SAN Designer are essential, flexible resources that help users configure and improve the efficiency of their SANs. These easy-to-navigate, intuitive interfaces simplify the configuration and analysis processes.

## **SAN Visibility**

SAN Visibility is a SAN data analysis tool that analyzes your SAN configuration securely, providing an automated inventory process for switches, HBAs, and storage systems, including firmware version verification.

## **SAN Designer**

SAN Designer provides quick and easy ways to design SANs based on specific performance, cost, and future storage needs. The tool generates a SAN topology diagram, a detailed list of required SAN components, as well as recommendations for planning future growth requirements.

For additional information, refer to the Storage Networking Blueprints and Solutions page: [www.hp.com/go/san](http://www.hp.com/go/san)

# HP StorageWorks B-series infrastructure

The HP StorageWorks B-series switch family provides a comprehensive range of SAN solutions—from flexible SAN switches, software features, and embedded switches to enterprise-class director switches.

## Key features and benefits

B-series SAN directors and SAN switches provide a flexible, intelligent platform for networking storage. With models ranging from entry-level 8-port SAN switches to 384-port directors with multiple blade options, the B-series family addresses the needs of small departments and global enterprise businesses alike.

Key features include:

- Multiprotocol support (Fibre Channel, FCIP, and iSCSI)
- Flexible, scalable with investment protection
- LSANs (Logical SANs)
- 1 Gb/s, 2 Gb/s and 4 Gb/s auto-sensing performance

### B-series software features

- Power Pack: includes a specially priced bundle featuring Advanced Performance Monitoring, Fabric Watch, ISL Trunking, and Extended Fabric
- Advanced Performance Monitoring: provides complete resource utilization analysis to measure end-to-end service levels and optimize performance in large SANs
- Fabric Watch: proactively monitors the health and performance of switches and the SAN fabric and sends alerts about potential faults
- Extended Fabric: increases SAN fabric coverage over longer distances—up to 500 km
- ISL Trunking: logically groups up to eight e-ports to provide up to 32 GB/s bandwidth in a single logical pipe
- Extended Fabrics: extends SANs to provide “native” Fibre Channel distances up to 500 km

# HP B-series SAN Switches for BladeSystems

HP B-series SAN Switches for BladeSystems maximize server consolidation and efficiency. Introducing the Brocade 4 GB SAN Switch for HP BladeSystem c-Class, the most expandable embedded SAN switch module for a server blade in the market.

Brocade 4 GB SAN Switch for HP BladeSystem p-Class

Brocade 4 GB SAN Switch for HP BladeSystem c-Class

# HP StorageWorks C-series infrastructure

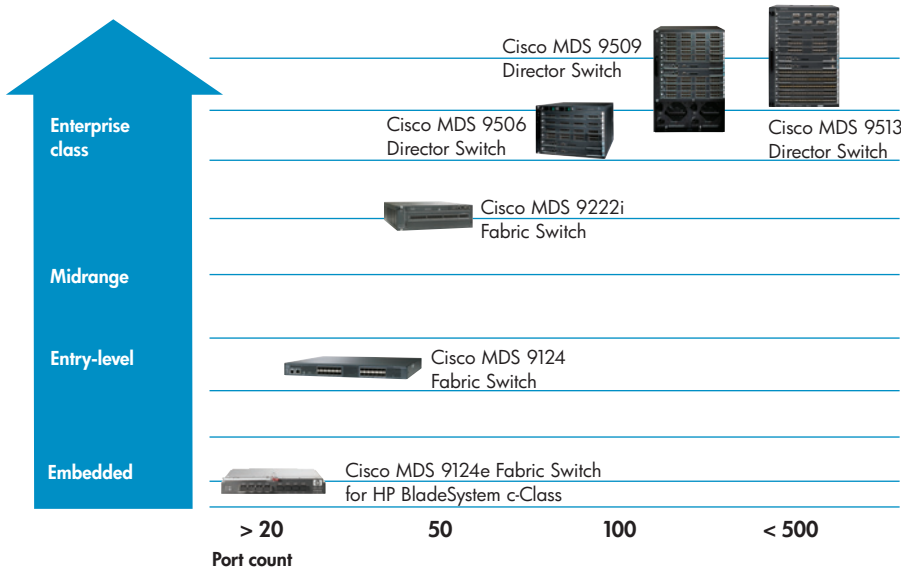

Choosing a Cisco MDS 9000 storage interconnect solution within the HP StorageWorks family brings you the technology of the IP networking market leader as well as the support of a leading systems and storage manufacturer.

## Key features and benefits

The C-series family expands on the broad HP portfolio of SAN infrastructure solutions. These solutions provide high performance and scalability and deliver intelligent network services such as:

- Multiprotocol and multi-transport integration (Fibre Channel, iSCSI, and FCIP)
- Virtual SANs (VSANs)
- Advanced traffic management
- Embedded diagnostics
- Role-based security

# HP C-series Fabric Switches for BladeSystem

HP C-series Fabric Switch for HP BladeSystem c-Class maximizes server consolidation and efficiency. The switch has an integrated design to decrease complexity and reduce costs.

Cisco MDS 9124e Fabric Switch for HP BladeSystem c-Class

## Technical specifications

# Simply File Services

Small and medium-sized businesses feel the crunch caused by growing storage data volumes. Much of the storage growth is driven by unstructured files, such as rich media, productivity documents, and backup files.

A dedicated and optimized file-serving solution consolidates file storage to improve performance, simplify management, and increase efficiency. Networked storage is accessible to all computers that can access the network, making it easier to centrally scale, manage, and protect.

HP ProLiant Storage Servers are Windows-powered enhanced file-and-print server solutions for small or medium business, branch office, workgroup, or data center IT environments. These preloaded, preconfigured, and fully tested solutions take advantage of standard Ethernet-based networks to give you consolidated network-attached storage (NAS) for file-and-print serving.

Like most NAS solutions, they support heterogeneous files. They improve data access to clients and applications and provide network-accessible storage to a mix of clients and servers running different operating systems and file access protocols.

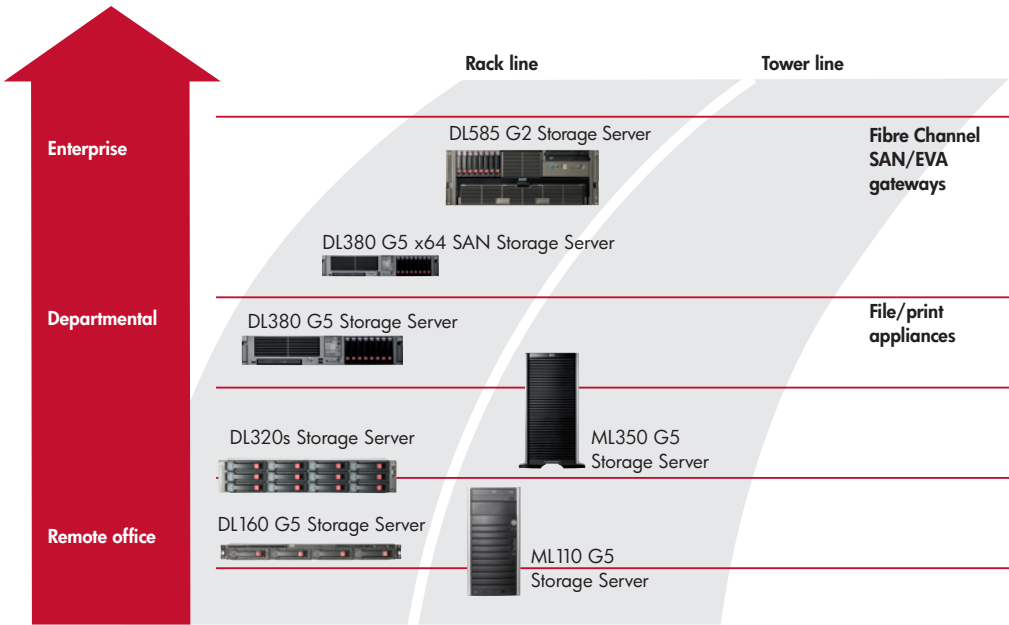

Choosing an HP ProLiant Storage Server will enable you to:

- Increase shared file storage capacity quickly and easily while reducing the time and personnel required to manage and protect data
- Consolidate the number of file-and-print servers to optimize capacity utilization and performance usage
- Integrate the solution seamlessly into Windows environments and run preferred backup or antivirus application right on the box
- Deploy a no-frills disk-based backup solution as an interim step or alternative to tape backup
- Achieve near-real-time full application or file recovery over an IP network, by combining it with HP StorageWorks Storage Mirroring software

For more information, visit: [www.hp.com/go/simplystorageworks](http://www.hp.com/go/simplystorageworks)

# HP ProLiant Storage Server family overview

With a full range of HP ProLiant Storage Servers, you can choose the level of performance and scalability you need to meet your specific file-serving requirements.

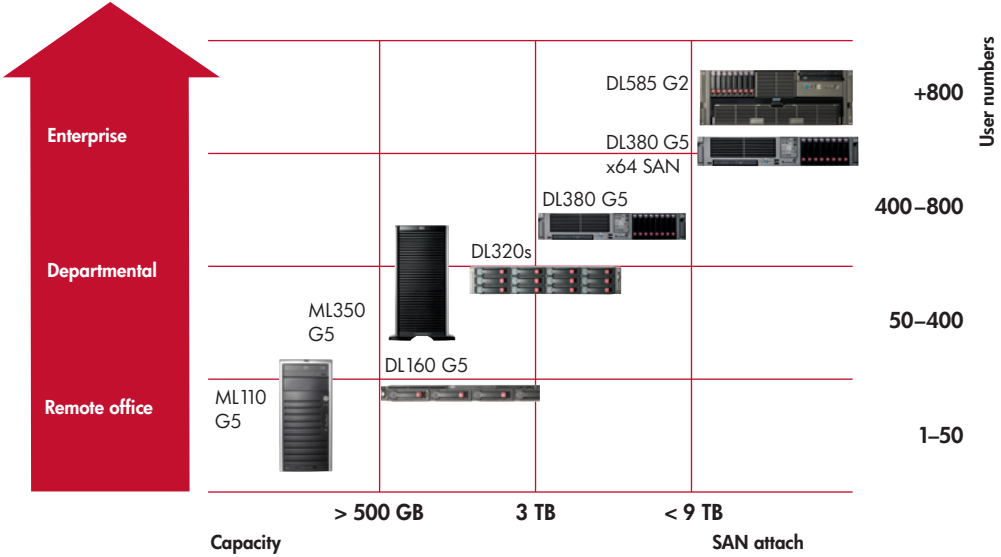

Want to combine file-and-print serving with application data hosting? Consider the HP StorageWorks All-in-One Storage Systems featured on pages 5–11.

# HP ProLiant Storage Servers

## Key features and benefits

- **Fast and easy to deploy:** The Windows-powered operating system is preinstalled and user storage is preconfigured, so it is a quick, secure, and easy way to add storage to your network or to add intelligent file and iSCSI services to your Fibre Channel SAN.
- **A single centralized file server platform to manage and protect:** Consolidate islands of direct-attached storage to one easy-to-use Windows platform or create a scalable disk-based backup or replication target.
- **Microsoft Windows-powered operating system preinstalled:** It integrates seamlessly into your Active Directory and Distributed File System (DFS) environments, runs your favourite antivirus or backup applications, and, if you have used Microsoft Management Console (MMC) before, will not present a steep learning curve.
- **Multiprotocol file serving:** You can deploy in wide range of heterogeneous file-serving environments with support for SMB/CIFS, NFS, HTTP, FTP, WebDAV, AppleTalk, and NetWare file protocols.
- **Add file access to your SAN or tier SAN block access:** Some models act as a file/iSCSI gateway into a Fibre Channel SAN, providing IP-based access to virtually unlimited storage.
- **Intelligent storage management features:** Make more efficient use of storage space using the file deduplicating Single-instance Storage (SIS) feature and the benefits of other storage-specific tools such as Index-based search, Microsoft SharePoint Services support, Quotas, File Screening, Storage Reporting, and DFS Replication.
- **Print server support:** The print management console is integrated into the core functionality of the operating system, allowing management of multiple printers from a single interface.
- **HP ProLiant industry-standard reliability:** You can relax because your investment is protected and you are not locked into proprietary hardware.
- **Microsoft iSCSI Software Target support:** Lower your total cost of ownership by hosting application (block) storage on your storage server. SAN gateway models featuring the Microsoft Windows Unified Data Storage Server 2003 Enterprise x64 Edition operating system include iSCSI target functionality, while other models can be upgraded with optional software.

# HP ProLiant ML110 G5 Storage Server

The HP ProLiant ML110 G5 Storage Server is an affordable single processor tower file-serving solution designed to provide a solid network storage foundation essential to small or remote businesses environments.

## Key features and benefits

- **Entry-level tower platform:** the two-drive 320 GB SATA model sets a new standard for ProLiant Storage Server affordability, while four-drive SATA and SAS models deliver even more value with additional capacity and performance
- **Simplicity:** offers a consolidated, intuitive interface to basic storage server functionality that both novice and experienced administrators alike will appreciate

<b>Processor</b>	Single-core Intel® Celeron® 420 1.6 GHz (320 GB SATA model) Dual-Core Intel® Pentium® E2160 1.8 GHz (1 TB SATA, 2 TB SATA, and 584 GB SAS models)
<b>Memory</b> (std./max.)	512 MB or 1 GB/8 GB
<b>Operating system</b>	Microsoft Windows Storage Server 2003 Release 2 (Workgroup x64 Edition—320 GB SATA model) (Standard x64 Edition—1 TB SATA, 2 TB SATA, and 584 GB SAS models)
<b>Storage controller</b>	None—Software RAID (320 GB SATA model) Smart Array E200 Controller with 128 MB BBWC (1 TB SATA, 2 TB SATA, and 584 GB SAS models)
<b>Internal storage</b>	Up to four internal LFF SATA or SAS HDDs preinstalled (2 x 160 GB SATA; 4 x 250 or 500 GB SATA or 146 GB SAS)
<b>Network controller</b>	Embedded NC105i PCIe Gigabit Ethernet Server Adapter
<b>Form factor</b>	Micro ATX tower

# HP ProLiant DL160 G5

## Storage Server

The HP ProLiant DL160 G5 Storage Server is an affordable space-saving rack-mount network storage solution for small workgroups, small businesses, or remote offices.

### Key features and benefits

- **Industry-standard hardware:** the ProLiant DL160 platform with Smart Array controller is both affordable and powerful
- **Versatility for a wide range of deployments:** support for both SATA and SAS drives helps you balance capacity, performance, and reliability

### Technical specifications

Processor	Quad-core Intel® Xeon® E5405 (2.00 GHz)
Memory (std./max.)	1 GB or 2 GB/32 GB
Operating system	Microsoft Windows Storage Server 2003 Release 2 (Standard x64 Edition)
Storage controller	Smart Array E200 Storage Controller with 128 MB BBWC included
Storage capacity	Four internal LFF SATA or SAS HDDs preinstalled (4 x 160, 250, 500, or 750 GB SATA or 300 GB SAS)
Network controller	Dual embedded NC105i PCI Express Gigabit Server Adapters
Form factor	1U rack

# HP ProLiant ML350 G5 Storage Server

The HP ProLiant ML350 G5 Storage Server is a powerful tower file-serving solution with high-availability and performance features plus unsurpassed flexibility that is ideal for small and medium businesses.

## Key features and benefits

- **High-capacity SATA-based and high-performance SAS-based models:** choose the model best suited to your performance, capacity, and price needs
- **Large-capacity expansion with external storage enclosures:** with a wide range of external storage enclosures that support SATA, SAS, SCSI, or Fibre Channel-based hard disk drives
- **Dual-core Intel Xeon processor technology:** dual-core processor provides excellent performance for the most demanding file-and-print serving requirements; add a second processor for even greater performance capability

## Technical specifications

Processor	Dual-core Intel® Xeon® 5150 (2.67 GHz)
Memory (std./max.)	1 GB/4 GB
Operating system	Microsoft Windows Storage Server 2003, Release 2 (Standard Edition)
Storage controller	Smart Array E200i Controller with 128 MB BBWC included
Internal storage	Six internal 1.5G SATA or 3G SAS HDDs preinstalled (6 x 160, 250, 500 GB SATA, or 300 GB SAS)
Network controller	Embedded NC373i Multifunction Gigabit Network Adapter
Form factor	5U tower (Optional Rack Kit available)

# HP ProLiant DL320s Storage Server

The HP ProLiant DL320s Storage Server is a highly integrated and high-density file-serving solution with enterprise-level features at an affordable price for remote office and departmental environments.

## Key features and benefits

- **High-density storage on a highly integrated platform:** packs all the storage (with 12 drive slots, the DL320s Storage Server supports up to 9 TB raw) and I/O you need into only 2U of rack space
- **High-capacity SATA-based and high-performance SAS-based models:** choose the model that best balances your performance, capacity, and affordability needs

## Technical specifications

Processor	Dual-core Intel® Xeon® 3070 (2.67 GHz)
Memory (std./max.)	1 GB/4 GB
Operating system	Microsoft Windows Storage Server 2003 Release 2 (Standard Edition)
Storage controller	Smart Array P400/512 MB Controller (RAID 0, 1, 5, 6) with BBWC
Internal storage	Twelve 3.5" LFF SATA or SAS hard drives, internal storage capacity of up to 9 TB (12 x 750 GB SATA hard drives)
Network controller	Embedded NC324i PCIe Dual-port Gigabit Server Adapter
Form factor	2U rack

# HP ProLiant DL380 G5 Storage Server

HP ProLiant DL380 G5 Storage Servers are high-performance network storage appliances—and can also be used in addition to a SAN/EVA gateway solution—for workgroup and enterprise environments.

## Key features and benefits

- **Flexible:** A DL380 Storage Server comes as either a file server appliance with its own direct-attached storage or as a SAN/EVA gateway solution that adds services to your Fibre Channel SAN.
- **Scalable to large capacities:** File appliance models are designed for easy expansion with HP StorageWorks MSA enclosures and either SAS or SATA hard disk drives. Four models even include an MSA60 and either six or 12 hard drives to get you started.
- **Additional file access for SAN or tier SAN block access:** The new x64 SAN Storage Server model is a file and iSCSI gateway into a Fibre Channel SAN, providing IP-based access to virtually unlimited SAN storage.

## Technical specifications

Processor	Up to two quad-core Intel® Xeon® E5345 2.33 GHz
Memory (std./max.)	2 GB/32 GB on base, 1.2 TB SCSI, 2 TB SATA, and 1.16 TB SAS models (all models except x64 SAN model); 4 GB/32 GB on x64 SAN model
Operating system	Microsoft Windows Storage Server 2003 Release 2 (Standard x64 Edition)—all models except x64 SAN model Microsoft Windows Unified Data Storage Server 2003 (Enterprise x64 Edition) for x64 SAN model
Storage controller	Smart Array P400 with 512 MB BBWC for internal drives Smart Array 6402 with 128 MB BBWC for external drives (1.2 TB SCSI and 2 TB SATA models only) Smart Array P800/512 MB (all models except x64 SAN model); Smart Array P400/512 MB (x64 SAN model)
Internal storage	Two 36 GB SAS HDDs—all models except 1.16 TB SAS model (8 x 146 GB)
Network controller	Embedded Dual NC373i Multifunction Gigabit NICs
Form factor	2U rack (Storage Server only)

# HP ProLiant DL585 G2

## Storage Server

The HP ProLiant DL585 G2 Storage Server is a powerful and highly expandable SAN/EVA gateway solution that is ideal for mission-critical data center file-serving and tiered SAN (Fibre Channel and iSCSI) environments.

### Key features and benefits

- **Unified storage operating system:** The DL585 G2 Storage Server comes with Microsoft Windows Unified Data Storage Server 2003, a dedicated file-and-print server operating system with iSCSI connectivity and clustering capability built in. It is all based on the proven Windows Storage Server 2003 R2 code base and takes advantage of its superior security, stability, performance, and management features.
- **SAN/file/iSCSI fusion:** Designed for use as a file-serving and/or iSCSI gateway into a Fibre Channel SAN, providing IP-based access to virtually unlimited storage. It can facilitate consolidation of islands of direct-attached storage to the SAN, as well as help tier block storage for application servers by creating access to the SAN via inexpensive Ethernet infrastructure.
- **High performance, reliable, and expandable:** Supports up to four processors, up to 128 GB of memory, eight available I/O expansion slots, multifunction gigabit NICs, Hardware RAID, and redundant power and cooling.

### Technical specifications

Processor	Two Dual-Core AMD Opteron™ 8220SE 2.8 GHz
Memory (std./max.)	4 GB/128 GB
Operating system	Microsoft Windows Unified Data Storage Server 2003 (Enterprise x64 Edition)
Storage controller	HP Smart Array P400 with 512 MB of BBWC (in a PCI Express slot)
Internal storage	Two 36 GB 10k SFF SAS HDDs
Network controller	Embedded dual NC371i multifunction gigabit network adapters
Form factor	4U rack

# HP StorageWorks All-in-One Storage Systems as a file-serving solution

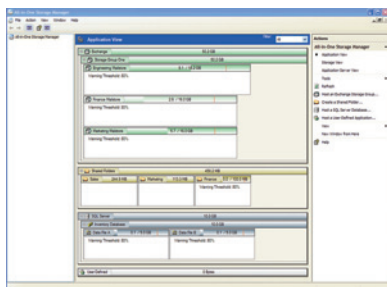

HP StorageWorks All-in-One (AiO) Storage Systems are radically simple, integrated, and affordable network storage solutions that enable small and midsized companies to manage, grow, and protect their data easily.

The HP StorageWorks AiO400t, AiO400r, AiO600, AiO SB600c, and new AiO1200 Storage Systems provide shared storage expansion for application servers (iSCSI SAN), enhanced file serving for end-user clients (Windows NAS), and comprehensive data protection. These fully integrated solutions are designed to be deployed on the existing TCP/IP network or subnet and provide everything you need to lower the cost and complexity associated with rapidly growing data environments.

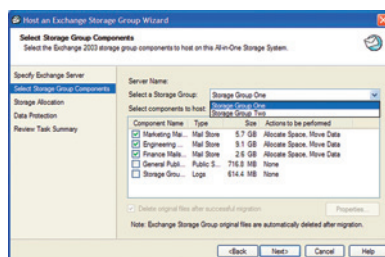

## All-in-One Storage Manager

A single interface to manage storage and data protection from an application-centric point of view.

## Set-up and migration tools

IT generalists can set up storage quickly and easily and migrate data using “best-practice” wizards.

For full product overview go to pages 6 – 11 of this guide or to:

[www.hp.com/go/AiOstorage](http://www.hp.com/go/AiOstorage)

# Simply Business Protection

Reliable data protection is one of the most important challenges that businesses face today. To help ensure data availability in the event of any threat, it is essential to have the appropriate data protection and recovery strategy in place.

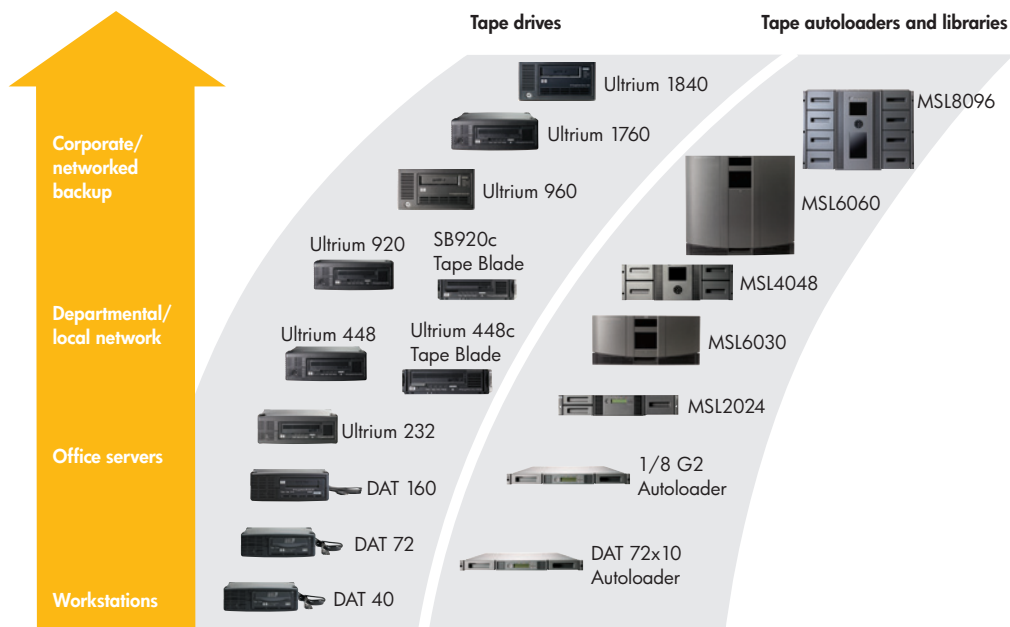

With Simply Business Protection, HP makes it easy to choose the right strategy. We offer simple and reliable solutions for every need—from instant recovery of business-critical data to the complete protection afforded by media held offsite—all backed by comprehensive support for lasting peace of mind:

- **HP StorageWorks DAT tape drives:** for low-cost, high-reliability backup of small servers and workstations
- **HP StorageWorks Ultrium tape drives:** the best choice for investment protection, in a choice of full- and half-height models
- **HP StorageWorks tape autoloaders:** for unattended backup that frees up IT resources and minimizes the risk of human error
- **HP StorageWorks MSL tape libraries:** for centralized backup to a single automated device
- **HP Storage Media:** tested and certified for all StorageWorks drives and automation solutions
- **HP StorageWorks disk-based backup solutions:** disk-based iSCSI-connected solution for unattended backup and improved restore performance
- **HP Data Protection Storage Servers:** near-continuous protection for Windows file servers that allows end users to restore their own files
- **HP Storage Software:** customized software solutions protecting infrastructure and data

# HP StorageWorks tape drives, autoloaders, and libraries

HP meets customer needs for tape backup, from small and medium-sized businesses to enterprise corporations.

All HP StorageWorks tape drives, autoloaders, and libraries come complete with an in-box CD containing an electronic user guide, drivers, and HP StorageWorks Library and Tape Tools diagnostic utilities.

For more information about products and connectivity, refer to: [www.hp.com/go/tape](http://www.hp.com/go/tape) and [www.hp.com/go/connect](http://www.hp.com/go/connect)

# HP StorageWorks DAT tape drive family

The HP StorageWorks DAT tape drive family provides the perfect balance between low cost and high reliability for backing up small servers and workstations.

HP StorageWorks DAT drives are based on Digital Data Storage (DDS) format, the most successful tape backup format of all time. DDS technology has led the tape market for so many years because it meets the needs of small and medium-sized businesses for reliable, cost-effective data protection better than any other technology. HP's long experience in developing DAT drives provides customers with a proven track record of reliability.

	DAT 40	DAT 72	DAT 160
Generation	Gen 4 (DDS-4)	Gen 5	Gen 6
Capacity (compressed*)	40 GB	72 GB	160 GB
Transfer rate (GB/hr compressed*)	21.6 GB/hr	21.6 GB/hr	49.3 GB/hr
Interface	USB or SCSI	USB or SCSI	USB, SCSI, or SAS

\* Assumes 2:1 data compression

# HP StorageWorks DAT 40 SCSI and DAT 40 USB Tape Drives

These tape drives provide dependable entry-level backup solutions for smaller servers and workstations—an ideal balance between cost and performance. Choose between SCSI or USB interface.

## Key features and benefits

- **Entry-level capacity:** up to 40 GB\* of data on a single tape
- **Performance:** transfer rate up to 21.6 GB/hr\*
- **Proven reliability:** DAT has a long track record of reliability and the largest installed base of any tape technology
- **Low cost of ownership:** lowest media price of any tape technology
- **Investment protection:** full read/write compatibility with DDS/DAT drives and media from HP and other manufacturers
- **Simplicity:** HP OBDR restores your entire system at the touch of a button
- **Compact:** small, half-height form factor
- **Broad compatibility:** with a wide range of servers, operating systems, and backup software
- **Manageability:** HP StorageWorks Library and Tape Tools utilities
- **Complete solution:** includes HP Data Protector Express Single Server Edition backup and recovery software, the Data Protector Express Bare Metal Disaster Recovery option, and HP StorageWorks Library and Tape Tools

# HP StorageWorks Ultrium 232 Tape Drive

This affordable first-generation LTO superdrive delivers enterprise-class backup capacity, performance, and reliability at a midrange price.

## Key features and benefits

- **Affordable capacity:** up to 200 GB\* on a single cartridge
- **High performance:** transfer rate of 115 GB/hr\*
- **Compact:** half-height form factor taking up less space in rack environments
- **Enterprise-class reliability:** with active head cleaning, lower power consumption, and intelligent tape handling
- **Simplicity:** HP OBDR and the Data Protector Express Bare Metal Disaster Recovery option restore your entire system at the touch of a button
- **Investment protection:** full read/write compatibility with Ultrium drives and media from HP and other manufacturers
- **Complete solution:** includes HP Data Protector Express Single Server Edition backup and recovery software, the Data Protector Express Bare Metal Disaster Recovery option, and HP StorageWorks Library and Tape Tools
- **Data rate matching:** enables the drive to dynamically match the transfer rate to the speed of the host for enhanced performance and reliability

# HP StorageWorks Ultrium Tape Blades

HP StorageWorks Ultrium Tape Blades deliver an internal tape backup solution for HP BladeSystem c-Class customers not connected to a SAN.

HP StorageWorks Ultrium 448c Tape Blade

HP StorageWorks Ultrium SB920c Tape Blade

## Key features and benefits

- **Integrated data protection solution:** by integrating within the BladeSystem c-Class enclosure, a complete server, storage, and data protection solution is achieved
- **Versatility:** provides direct-attached data protection of adjacent server, as well as network backup of all other data within the BladeSystem c-Class enclosure
- **Investment protection:** full read/write compatibility with Ultrium drives and media from HP and other manufacturers
- **Complete solution:** includes HP Data Protector Express Single Server Edition backup and recovery software, the HP Data Protector Express Bare Metal Disaster Recovery option and HP StorageWorks Library and Tape Tools to help with installation, management, and troubleshooting
- **Data rate matching:** enables the drive to dynamically match the transfer rate to the speed of the host for enhanced performance and reliability

# HP StorageWorks LTO4 Ultrium 1760 Tape Drive

The HP StorageWorks LTO4 Ultrium 1760 Tape Drive delivers a compressed storage capacity of 1.6 TB and a compressed data transfer rate of 576 GB/hour while providing hardware data encryption to deliver the ultimate data protection for entry-level and midsized customers.

## Key features and benefits

- **High capacity:** stores up to 1.6 TB of data on a single data cartridge using 2:1 compression. High-capacity drive reduces the costs associated with data protection by requiring fewer data cartridges to complete backups.
- **Higher performance with dynamic data rate matching:** provides a compressed data transfer rate of 576 GB/hr, allowing customers to scale their backup capacities without having to increase their backup windows. HP's exclusive dynamic data rate matching feature can match the throughput of the host and reduce starting and stopping the tape drive.
- **Half-height form factor for easy installation and integration:** allows for installation into all standard 5.25-inch media bays.
- **AES 256-bit hardware data encryption:** provides easy-to-enable security to protect the most sensitive data and prevent unauthorized access of tape cartridges.
- **Management and diagnostics software included:** Tape drive management, performance optimization, and troubleshooting are made simple using the HP StorageWorks Library and Tape Tools application that is included with the HP Ultrium 1760 Tape Drive.
- **WORM (Write-Once, Read-Many) media support:** For IT organizations with stringent, long-term data retention requirements, LTO4 WORM provides a simple and secure method for archiving records that allows customers to affordably meet the toughest industry compliance regulations.

# HP StorageWorks LTO4 Ultrium 1840 Tape Drive

The HP StorageWorks LTO4 Ultrium 1840 Tape Drive represents HP's fourth-generation of LTO tape drive technology, which is capable of storing up to 1.6 TB per cartridge while providing hardware-based data encryption to enable greater levels of security and unprecedented performance.

## Key features and benefits

- **Maximum capacity:** up to 1.6 TB\* on a single cartridge
- **High performance:** transfer rate of 864 GB/hr\*
- **AES 256-bit hardware data encryption:** provides easy-to-enable security to protect the most sensitive data and prevent unauthorized access of tape cartridges.
- **Write Once, Read Many (WORM):** support for LTO4 WORM media provides a simple and secure method of archiving records as part of a compliance solution, to meet the toughest of industry regulations
- **Enterprise-class reliability:** with active head cleaning, lower power consumption, and intelligent tape handling
- **Simplicity:** HP OBDR and the Data Protector Express Bare Metal Disaster Recovery option restore your entire system at the touch of a button
- **Investment protection:** read/write compatibility with LTO3 media and read compatibility with LTO2 media
- **Complete solution:** includes HP Data Protector Express Single Server Edition backup and recovery software, the Data Protector Express Bare Metal Disaster Recovery option, and HP StorageWorks Library and Tape Tools
- **Data rate matching:** enables the drive to dynamically match the transfer rate to the speed of the host for enhanced performance and reliability

# HP StorageWorks rack-mount and tape-array solutions

Rack-mount and tape-array solutions are both designed to provide a modular enclosure for direct-attached SCSI, USB, and SAS backup and archiving applications.

## HP StorageWorks Rack-Mount Kits

HP rack-mount enclosures allow customers to expand and migrate between different capacity points or drive technologies as required.

### Rack-mount enclosures (one drive installed)

1U	HP StorageWorks USB Rack-Mount Kit with one DAT 72 drive installed	AG594A
1U	HP StorageWorks USB Rack-Mount Kit with one DAT 160 drive installed	AG703A
1U	HP StorageWorks Rack-Mount Kit with one Ultrium 448 SCSI drive installed	DW028B
1U	HP StorageWorks Rack-Mount Kit with one Ultrium 920 SCSI drive installed	EH903A
3U	HP StorageWorks Rack-Mount Kit with one Ultrium 960 SCSI drive installed	Q1595B
1U	HP StorageWorks Rack-Mount Kit with one Ultrium 1760 SAS drive installed	EH946A
3U	HP StorageWorks Rack-Mount Kit with one Ultrium 1840 SCSI drive installed	EH926A

### Rack-mount enclosures (no drive installed)

1U	HP StorageWorks Rack-Mount Kit: holds 2 half-height SCSI drives	A7445B
1U	HP StorageWorks Rack-Mount Kit: holds 2 half-height USB drives	A8007A
1U	HP StorageWorks Rack-Mount Kit: holds 2 half-height Ultrium SAS drives	AE459A
3U	HP StorageWorks Rack-Mount Kit: holds 4 half-height or 2 full-height SCSI drives	274338-B22
3U	HP StorageWorks Rack-Mount Kit: holds 2 full-height or 4 half-height Ultrium SAS drives	AG576A

## HP StorageWorks Tape Array 5300

HP StorageWorks Tape Array 5300	C7508B
HP StorageWorks Tape Array 5300—factory racked	C7508BZ
HP Tape Array 5300 Power Supply Fan Kit	C7496B
HP DVD+RW Array Field Module	Q1592B

This 3U rack enclosure holds two full-height, four half-height, or one full-height and two half-height drive modules. The offline hot-swappable array allows you to replace drives without powering down the server. An optional redundant power supply and fan module is also available.

Note: see tape drive section for information on drive variants

# HP StorageWorks Tape Autoloaders

This is where versatility and flexibility meet. HP StorageWorks Tape Autoloaders provide you with unattended backup that frees up your IT resources and minimizes the risk of human error.

## HP StorageWorks DAT 72x10 Tape Autoloader

This offers simple unattended DAT backup with 10 cartridge slots, allowing for one cartridge each day plus a weekly cleaning cycle.

## HP StorageWorks 1/8 G2 Tape Autoloader

This family is designed for basic data protection and provides cost-effective, easy-to-install unattended backup.

\* Assumes 2:1 data compression

# HP StorageWorks DAT 72x10 Tape Autoloader

The HP StorageWorks DAT 72x10 Tape Autoloader is a low-cost, entry-level, automated tape backup solution for small and medium-sized businesses or remote offices with limited IT staff.

## Key features and benefits

- **Reduced IT staff requirements:** backups can be scheduled to occur automatically at any time of day
- **Complete solution:** includes HP Data Protector Express Single Server Edition backup and recovery software, the Data Protector Express Bare Metal Disaster Recovery option, and HP StorageWorks Library and Tape Tools
- **Low media cost:** uses the least-expensive tape media to help lower the cost of ownership
- **Highly reliable:** reduces manual administrative tasks and the risk of error in the backup process
- **Industry standard:** DAT offers a proven track record of reliability and assured investment protection
- **Easy disaster recovery:** OBDR and the Data Protector Express Bare Metal Disaster Recovery option can restore an entire system at the touch of a button, without the need for system disks or software CDs
- **Backward compatible:** reads and writes industry-standard DDS-3, DDS-4, and DAT 72 media
- **Broad compatibility:** supports many different servers, operating systems and backup software applications
- **Management and diagnostics:** tape drive management and performance optimization is simple with HP StorageWorks Library and Tape Tools software
- **Space efficient:** provides a 10-cartridge capacity in a 1U form factor

## Technical specifications

Form factor	1U
Capacity (native/compressed*)	360 GB/720 GB
Number of drives supported	1
Number of slots	10
Maximum transfer rate (compressed*)	21.6 GB/hr
Interface	Ultra160 SCSI LVD/SE
Dimensions (HxWxD in.)	1.7 x 17.6 x 31.2
Weight	23.6 lb

# HP StorageWorks

## 1/8 G2 Tape Autoloader

An ideal data backup solution for multiple servers, the 1/8 G2 Tape Autoloader is equipped with an Ultrium 1760 SAS, Ultrium 920 SCSI or SAS, Ultrium 448 SCSI, or Ultrium 232 SCSI tape drive.

### Key features and benefits

- **High capacity:** up to 12.8 TB\* of data with Ultrium 1760
- **High performance:** up to 160 MB/s\* with Ultrium 1760
- **Simplified IT:** integrated Web-based remote management interface to manage the autoloader from across the room or across the world
- **Manageability:** integrated barcode reader to easily manage your media
- **Affordability:** automates the backup process at a price comparable to standalone drives
- **Investment protection:** migrate 1/8 G2 Tape Autoloader drives into HP StorageWorks MSL2024, MSL4048, or MSL8096 Tape Libraries as performance and capacity needs change
- **Compatibility:** works with leading operating systems and backup software
- **Reliability:** provides consistent backup and changes tapes automatically, minimizing the risk of operator error
- **Compact:** holds eight cartridges and one drive in a 1U rack space
- **Complete solution:** includes HP Data Protector Express Single Server Edition backup and recovery software, the Data Protector Express Bare Metal Disaster Recovery option, and HP StorageWorks Library and Tape Tools

# HP StorageWorks MSL Tape Libraries

HP StorageWorks Tape Libraries are flexible, scalable, manageable solutions for centralized backup to a single automated device.

## HP StorageWorks MSL Tape Libraries

HP StorageWorks Tape Libraries provide:

- Unattended backup that frees up your IT resources and minimizes the risk of user error
- Investment protection with both capacity and performance upgrades for environments with unpredictable data growth
- Easy manageability with intelligent tools that streamline and simplify the backup process
- Compatible with industry-leading servers, operating systems, and backup software

For more information, visit: [www.hp.com/go/ebs](http://www.hp.com/go/ebs)

# HP StorageWorks MSL2024/4048/8096 Tape Libraries

These tape libraries provide flexible and manageable solutions for centralized backup to a single automated device, freeing valuable IT resources for more strategic work.

## Key features and benefits

- **Greater value:** provides exceptional storage density with up to 153.6 TB\* of compressed capacity in the 8U form factor
- **Manageability:** integrated Web-based management features reduce the dependency on local IT resources, allowing multiple sites to be supported centrally
- **Investment protection:** you can choose from a broad range of LTO tape drives and increase capacity and/or performance easily with tool-free upgrades
- **Simplifies IT:** standard library features including a barcode reader provide faster inventory times and facilitate tracking of media
- **MSL2024:** the ideal entry-level tape library that combines tape library capacity and features in the compact form of a tape autoloader
- **MSL4048:** perfect for small to medium business, unattended workgroups, or remote offices, and backup and restore is easily managed from across the room or across the globe with browser-based remote management interface
- **MSL8096:** meets a broad range of demanding data storage needs, including unattended backup, archive, and disaster recovery for medium to large businesses, workgroups, or remote offices

# HP StorageWorks

## MSL6000 Tape Libraries

This product family provides a complete backup and restore solution for midrange and departmental environments, delivering performance, investment protection, and unparalleled flexibility.

### Key features and benefits

- **Scalability:** multiunit stacking allows the libraries to grow using any combination of contiguous 5U and 10U MSL6000 tape libraries, for up to 240 slots and 16 drives in a 40U rack space that provides a maximum capacity of 384 TB\*
- **Flexibility:** MSL tape libraries are available with either Fibre Channel or SCSI interfaces for use in direct or network-attached environments
- **Manageability:** the user-friendly GUI control panel and Web interface make library management easy from a remote or onsite location
- **Easy to use:** the libraries offer one (MSL6030) or two (MSL6060) configurable mail slots for quick load/unload and removal of magazines
- **High performance:** MSL6000 tape libraries provide the performance and capacity that are required to address increasing data volumes and decreasing backup windows
- **Reliability:** using LTO Ultrium drives and proven library robotics, MSL6000 tape libraries provide the necessary high reliability for today's demanding environments
- **Compatibility:** MSL6000 tape libraries are compatible with a broad range of operating systems, ISV packages, and hardware platforms to provide best-in-class interoperability

# HP storage media

You need to know that your media gives you the best recovery in the industry. HP understands that there are no second chances when it comes to data recovery—the smallest imperfection could ultimately put someone out of business. All HP media is tested and certified for all StorageWorks drives and automation solutions.

## Why choose HP storage media?

- More businesses store their data on HP-branded LTO, SuperDLT, DLT, and DDS cartridges than on any other media brand.
- No other brand of storage media is tested so extensively for optimum quality, reliability, and performance on HP drives and libraries.
- HP guarantees the highest level of restore reliability with media specifications that far exceed industry standards. In tests, HP media delivered three times the number of successful backup and restores compared to another leading brand.
- HP storage media is guaranteed to be compatible with certified drives and libraries from all other manufacturers. For additional information on storage media, visit: [www.hp.com/go/storagemedia](http://www.hp.com/go/storagemedia)

Drive type	Cartridge capacity (compressed)	Data cartridge	Cleaning cartridge
DAT 24	24 GB	C5708A	C5709A
DAT 40	40 GB	C5718A	C5709A
DAT 72	72 GB	C8010A	C5709A
Ultrium 230, 232	200 GB	C7971A	C7978A
Ultrium 448, 460	400 GB	C7972A	C7978A
Ultrium 960, 960 WORM	800 GB	C7973A	C7978A
Ultrium 1840	1.6 TB	C7974A	C7978A
SDLT 320	320 GB	C7980A	C7982A
SDLT 600	600 GB	Q2020A	C7982A

### HP labeled media for automation

- For automation customers, HP sells Custom Labeled and Non-Custom Labeled data cartridges: high-quality HP-branded storage media with a TriOptic bar code label.
- Choose Custom Labeled media when you need to specify the exact sequence of bar codes for your backup system.
- Choose Non-Custom Labeled media when you need fast delivery “off the shelf.” Bar codes are never duplicated but sequences are randomized.

### HP Storage Media Kits

- HP Storage Media Kits provide a complete solution for HP LTO and DAT users at a price that is about 5 percent less expensive than the cost of purchasing all of the components separately.\*
- Each kit contains 14 DAT or 20 LTO data cartridges, a DAT or LTO cleaning cartridge, as well as a complete set of tools to make backup part of your everyday business routine:

Drive type	Storage Media Kit
LTO1	C8013A
LTO2	C8014A
LTO3 RW	C8017A
DAT 72	C8012A

\* Based on product list price

# HP StorageWorks

## tape storage compatibility

HP's extensive compatibility testing program helps ensure that HP StorageWorks tape drives and tape automation products work with leading servers, operating systems, and backup applications—and not just those sold by HP.

Our tape solutions work seamlessly in many environments, making them especially suitable if you have a mixed-system environment. For the latest list of servers, workstations, operating systems, and backup software that support HP StorageWorks tape drives, check the tape backup compatibility pages at: [www.hp.com/go/connect](http://www.hp.com/go/connect) or [www.hp.com/go/ebs](http://www.hp.com/go/ebs)

For tape media compatibility, visit: [www.hptapecompat.com](http://www.hptapecompat.com)

### Compatibility with HP servers

- HP ProLiant
- HP Integrity
- HP 9000
- HP AlphaServers
- HP Workstations

### Compatibility with non-HP servers

- Dell
- IBM
- Sun
- Other third-party chip-sets—Adaptec, LSI

Note:

HP does not support One-Button Disaster Recovery on non-HP systems. HP does not support SDLT or DLT VS technology on non-HP systems.

### Compatible operating systems and software

Operating systems include Microsoft Windows Server, Windows 2000, and Windows XP; HP-UX; Novell Netware; Red Hat Linux; Sun Solaris; IBM AIX; Tru64 UNIX®; OpenVMS; and SCO.

Backup software applications include HP Data Protector and Data Protector Express software, CA BrightStor ARCserve, Symantec Backup Exec, Veritas NetBackup, Yosemite TapeWare, Legato NetWorker, Dantz Retrospect, IBM Tivoli, Ultrabak, and Columbia.

# HP disk-based backup solutions

HP disk-based backup solutions provide easy integration of disk into your existing backup environment. The new HP StorageWorks D2D Backup System, Virtual Library Systems, and Data Protection Storage Servers dramatically improve backup and recovery performance of LAN and SAN servers.

The HP Virtual Library System 1000i is a disk-based backup solution that appears like a normal tape-based solution to the user. It emulates physical tape drives or autoloaders, making it ideal for most existing storage environments.

The HP StorageWorks D2D Backup Systems provide reliable, consolidated data protection for up to six servers in a single, self-managing device. They are designed to work with your existing backup software application to fully automate daily backup jobs, requiring less manual handling than tape-based systems.

To learn more about disk-based backup, go to: [www.hp.com/go/disktodisk](http://www.hp.com/go/disktodisk)

# HP StorageWorks 1000i Virtual Library System

The HP StorageWorks 1000i Virtual Library System is a disk-based, iSCSI-connected storage solution that provides unattended backup and improved restore performance for midmarket, remote, or branch-office customers.

## Key features and benefits

- **Unattended backup:** Automated backup of application and file data provides a more simple and reliable data protection strategy.
- **Improved efficiency and performance:** By emulating multiple tape devices, it can back up multiple servers simultaneously. Plus, disk-based storage simplifies and accelerates data restores from hours to minutes.
- **iSCSI connectivity:** Provides easy integration into existing Ethernet networks, which allows multiple servers to be configured with their own SCSI-connected virtual tape device.
- **Seamless integration:** Emulates both tape drives and tape autoloaders for easy and seamless integration to tape-based environments.
- **Streamlined media management:** Disk-based storage minimizes the problems and costs associated with tape media management.
- **Easy deployment and management:** Preconfigured for virtual tape applications and easily auto-discovered on the LAN during setup. Web-based management enables remote access to configuration and diagnostics.
- **High reliability:** These systems provide high reliability, thanks to HP ProLiant server technology, RAID 5 data protection and hot-pluggable drive technology.
- **Secure as tape:** As is the case with a tape device, there is no external file system or server operating system access to protect.
- **Ready-to-use:** Comes with a free copy of HP Data Protector Express Single Server Edition. Upgrades are available for larger configurations.

## Technical specifications

Form factor	1U
Capacity (native/compressed*)	1.5 TB/up to 3 TB
Max. number of virtual drives	Up to 12 HP Ultrium LTO2 tape drives (6 can be configured as HP 1/8 autoloaders)
Disk drive interface	Serial ATA (SATA)
Disk drive capacity/type	500 GB, SATA 7,200 rpm
Number of disk drives	4
Storage controller	RAID 5
Interface	1 Gb Ethernet iSCSI
Performance	Up to 60 MB/s
Dimensions (HxWxD in.)	1.7 x 17.0 x 26.5
Weight	25.6 lb

# HP StorageWorks D2D Backup System

The HP StorageWorks D2D Backup System is an easy-to-install, easy-to-use disk-based backup for small and medium businesses that automates daily backup for up to six servers and lets you restore users' files in seconds instead of hours.

The HP StorageWorks D2D Backup System works with your existing backup software application to provide automated backup for multiple servers at less than the cost of a single LTO tape autoloader. Consolidating your backups onto a self-managing, disk-based device reduces the risk of losing data. There are fewer devices to manage, and the intuitive, browser-based management interface also lets you monitor your backup device from anywhere at any time. The system can help to improve backup performance by supporting the direct backup of up to six servers simultaneously.

This simple solution fits right into your existing Windows or Linux environment, working with your current hardware and software in most cases. Existing tape drives and backup software may be used with the HP D2D Backup System. Alternatively, the system comes with an optional integrated LTO tape drive or with a Data Protector Express Software Kit that includes all of the components needed to protect up to four servers and automatically move or copy backups from the D2D Backup System to tape.

## Key features and benefits

- **Simplicity:** Automating backup simplifies your data protection processes. Implementing unattended daily backup is especially good for businesses with limited IT resources.
- **Reliability:** Automation makes your data protection processes more dependable by reducing the risks of human error and problems associated with tape hardware and media—the two biggest causes of failed backups.
- **Affordability:** Scheduling daily backups to the HP D2D Backup System provides automated backup for up to six servers at less than the cost of a single LTO autoloader.
- **Fast restore:** Disk-based data protection provides online access to your backup data, allowing lost or corrupted files to be restored in minutes instead of hours or days.
- **Fast backup:** Backing up six servers simultaneously to a disk instead of one after the other to a tape drive or autoloader means that all backups get completed within your backup window.
- **Manageability:** A browser-based application lets you monitor your backup device from anywhere, locally or remotely, enabling you to check on available capacity, view and change device setup, add or change e-mail alerts, or copy backups to tape.

# HP software for data protection

HP software provides customized solutions that protect your customers' infrastructures and data.

With HP software and disaster-tolerant solutions, there is no problem if the weather, system glitches, or human error threaten to disrupt business.

The normal flow of business continues and your data is safe. HP customizes the solution to your data availability, replication, automation, and management requirements.

# HP Data Protector Express software

Designed to be easy to install, easy to use, and easy to manage for nonspecialist staff, this is the ideal software for a single machine or a small network that needs robust data protection. HP Data Protector Express offers the flexibility to back up data to tape, disk, CD, or a hierarchy of these media. It provides advanced features without compromising its ease of use.

## Key features and benefits

- Easy to install, configure, and manage without specialist staff
- Support for backup to disk, tape, and CD/DVD from Windows, Linux, and NetWare operating systems
- Includes secure backup data encryption to all supported media as well as support for HP LTO4 tape drive-based data encryption
- Can be extended easily with optional features when required
- Simple licensing structure: no complexities such as capacity-based licensing, per-processor licensing, or different licenses for different operating systems
- Special package for users of Microsoft Small Business Server operating systems

Note: HP Data Protector Express Single Server Edition (and the Data Protector Express Bare Metal Disaster Recovery option) is included with all HP StorageWorks tape drives and autoloaders. It is based on Data Protector Express and includes many of its features to provide robust protection of a single machine. Data Protector Express Single Server Edition can be upgraded easily to Data Protector Express by ordering a special part number that provides a significant discount to the regular price of Data Protector Express.

# HP Data Protector software

Scalable from single server to heterogeneous enterprise, this data management software automates high-performance backup and recovery from both disks and tapes—delivering maximum data protection while providing 24x7 business operations.

## Key features and benefits

- **Robust and proven enterprise backup solution** used by more than 22,000 customers.
- **Low cost of ownership** responds to the pressure to reduce IT costs and achieve greater operational efficiency. A simple and flexible license model includes the first year of support.
- **Easy-to-deploy installation** is made simple with the capability for fully automated distribution of agent software to all connected clients and a centralized licensing facility that reduces complexity.
- **Outstanding integration** for HP environments that supports a broad range of heterogeneous environments.
- **Respond to the need for 24x7 application availability** by integrating techniques to eliminate backup windows. These include Online Backup, Open File Backup, and Zero Downtime Backup (local and remote replication).
- **Utilizing Instant Recovery**, Data Protector software meets the demands of the most complex enterprise businesses for specific recovery time and recovery point objectives, as well as enables terabytes of critical data to be recovered within minutes.
- **Unique, industry-first virtual full backup** reduces the time and resources needed to perform a full backup. By using "pointers" rather than duplicating data, HP Data Protector software improves tape utilization and provides heterogeneous data protection.

To try Data Protector software for 60 days or for more information about the product, visit the Data Protector Web site at: [www.hp.com/go/dataprotector](http://www.hp.com/go/dataprotector)

# HP StorageWorks Storage Mirroring

HP StorageWorks Storage Mirroring software is a host-based Windows application that performs continuous data replication and enables server failover over a customer's existing IP LAN or WAN.

## Key features and benefits

### Business protection:

- Storage Mirroring protects business data, enabling restoration of data and the ability to failover servers within minutes to maintain a seamless working environment
- Provides extremely high levels of protection through stable performance, reduced latency and the ability to handle heavy amounts of data
- No distance limitations
- Real-time or scheduled replication

### Cost effective:

- Provides the best continuous protection at the lowest cost
- Simple licensing model—licensed per server, according to the Microsoft operating system the server is running on, with no need to buy additional modules for different applications
- By replicating only the bytes that change, Storage Mirroring utilizes the absolute minimum bandwidth required to protect your data

### Ease of use and installation:

- Allows companies even with limited IT expertise to install and maintain the solution, helping to ensure a high level of data protection and business continuity
- Simple-to-use management console with flexible GUI, central view of all HP StorageWorks Storage Mirroring servers and the ability to view as many or as few servers as desired
- Works on any type of storage design—DAS, NAS, and SAN, as well as on any Windows server platform that runs Windows—ProLiant, Integrity, or third-party servers
- When disaster strikes, Storage Mirroring can immediately reassign the source server identity to a target server

## **Cascading**

The ability to connect switches to one another to create a larger SAN fabric.

## **CIFS, NFS, NCP, MAC, HTTP, and FTP**

Protocols that allow machines to send information to one another over a network.

## **Clustering**

The ability to group multiple servers for high availability or performance and appear to the user as one logical server (file server or application server). A server in a cluster is called a node, that is, four servers are a four-node cluster.

## **Compressed capacity**

Compressed capacity is the amount of data processed or transferred by a device. This data may have been encoded in such a way as to compress it, by either software or hardware processing. The tape industry normally quotes a 2:1 compression ratio as the standard, but actual compression ratios vary greatly depending on the type of data being compressed and may be more or less than 2:1.

## **Data replication**

The ability to replicate data to another system or site via either a LAN or SAN connect with Distributed File System (DFS). System administrators using this protocol can make it easy for users to access and manage files that are physically distributed across a network. Files appear to users as if they reside in one place on the network.

## **Digital Audio Tape (DAT)**

A term used interchangeably with Digital Data Storage (DDS). It refers to the technology originally used for audio recording, which was adapted by HP and Sony in 1988 for data storage. DAT is an open format produced by multiple manufacturers.

## **Direct-attached storage (DAS)**

Deployment of dedicated storage devices for each server. Disadvantages include inefficient storage use and allocation, and multivendor storage and management interfaces.

### **Disk-based backup**

Disk-to-disk (D2D) backup solutions provide online access to your data, allowing lost or corrupted files to be restored in minutes instead of hours or days, thus reducing downtime and its impact on productivity. Two-stage backups, often called disk-to-disk-to-tape (D2D2T), combine disk-based and tape-based data protection to achieve the benefits of both.

### **Dynamic Data Rate Matching (DDRM)**

Dynamic Data Rate Matching (DDRM) is a unique feature on all HP Ultrium drives that allows the speed of the tape to be varied to match the incoming data from the host. This maximizes write performance and minimizes tape repositioning.

### **Fibre Channel**

The topology and transport protocol used to send block-level data information between server and storage.

### **Host bus adapter (HBA)**

A PCI adapter that connects a server to the SAN fabric. Each HBA installed is referred to as a host.

### **Integrated Lights-Out (iLO) management**

Selected HP ProLiant storage servers provide embedded lights-out technology, which enables users to perform a full range of management tasks without physically being in front of the server. Find out more at:

[www.hp.com/servers/ilo](http://www.hp.com/servers/ilo)

### **IP and iSCSI protocol**

iSCSI is a new networking protocol similar to the Fibre Channel protocol, but which uses standard Ethernet-based Internet Protocol (IP) networks. iSCSI is particularly interesting for small environments with lower performance requirements.

### **Linear Tape-Open (LTO)**

A magnetic tape format technology developed as an alternative to DLT by a consortium of HP and other manufacturers. The first generation of LTO cartridge (LTO1) was released in 2000 with a native storage capacity of 100 GB. The latest generation is LTO4, which provides 800 GB of native capacity per data cartridge.

### **Native capacity**

Native capacity is the actual number of bits and bytes that a device or a piece of media can store without considering data compression.

## **Near-online**

Technology that uses disk-based storage devices to store infrequently accessed data. This includes tiered storage environments or disk-to-disk-to-tape backup. Near-online is often implemented with low-cost disk drives. However, their ability to match requirements needs to be verified.

## **Redundant Array of Independent Disks (RAID)**

A method of writing data simultaneously over multiple disk drives used in disk arrays for increased data protection and/or increased performance.

## **Replication**

Mirroring data between two arrays—usually located in separate data centers—to achieve the highest availability in case of failure of one data center. This can be achieved via host/IP-based replication or—for enterprise arrays such as EVA or XP—via SAN-based replication directly between two arrays.

## **RTO and RPO**

The Recovery Time Objective (RTO) is the amount of time a business process can be down. The Recovery Point Objective (RPO) is the amount of data a business can afford to lose. For 24x7 applications, the RPO could be the most recent transaction, whereas for file servers it could be last night's backup.

## **SAN fabric**

The hardware that connects workstations and servers to storage devices in a SAN. The SAN infrastructure enables any-server-to-any-storage-device connectivity through Fibre Channel switching.

## **Serial Advanced Technology Attachment (SATA)**

Interface technology for disk drives, providing the lowest cost per megabyte—ideal for storing low-usage reference information (an increasing regulatory requirement). SATA provides basic reliability and performance (based on an eight-hour and 10 percent to 30 percent duty cycle) compared to SCSI (and Fibre Channel) HDDs, which are more advanced, providing a 24x7 and 80 percent to 100 percent active duty cycle (read/write).

## **Serial Attached SCSI (SAS)**

A next-generation SCSI interface that uses serial technology.

## **Small Computer System Interface (SCSI)**

A protocol used to communicate with SCSI devices. It is also used by Fibre Channel technology to communicate with disk drives.

## **Snapshot**

The ability to duplicate data within a server, NAS device, or RAID Array and promote it as a copy of data while utilizing minimal disk space.

### **Storage area network (SAN)**

High-speed, special-purpose network connecting different data storage devices to servers. May extend to multiple or remote locations for backup and archival storage.

### **TOE card (TCP/IP Offload Engine)**

Network cards that offload network protocol tasks from the standard server CPUs.

### **Ultrium**

A high-capacity tape format based on LTO technology. It is an open format used by multiple manufacturers that provides enhanced performance and reliability over earlier formats.

### **Virtual Tape**

Virtual tape is a disk-based technology that emulates one or more tape drives, autoloaders, or libraries. A virtual tape device appears to the backup software and other devices on the network as a tape device, and its type depends on its configuration.

### **Virtualization**

Technologies that help remove physical storage boundaries by treating all available storage, regardless of its location, as one “virtual” pool.

### **Write-Once, Read-Many (WORM)**

A data storage technology that allows information to be written to storage media only once. It is used to prevent data from being altered or erased and it helps organisations meet regulatory requirements for retaining data securely in an unalterable format. Data can be appended but not changed or overwritten.

# HP Care Pack Services

Scalable, flexible, dependable—just like your storage.

Your storage is evolving. Now you can have the scalable support that evolves with it. HP Care Pack Services is an easy-to-buy, easy-to-use family of packaged services covering your lifecycle needs. You can rely on our highly skilled, HP-certified professionals to provide the expertise that spans leading storage technologies, and work side by side with you for better results. They will reduce the cost and complexity of defining, implementing, managing and improving your increasingly crucial storage processes. Push services beyond expectations and choose support that meets the changing needs of your business with the same reliability, scalability, and flexibility you demand of your storage.

Choose from the following range of services:

- **HP Storage Deployment**—Installation & Startup, Implementation, Data Center Service, Per-Event Services
- **HP Storage Support Services**—Hardware, Software Support Services, Mission Critical Storage Support Services, Multivendor Environment Support Services
- **Solution Service Capabilities**
- **HP Storage Education and Financial Services**

## HP Care Pack Services resources

To find out more about HP Storage Services, contact your local HP sales representative, Authorised Channel Partner, or visit the following sites:

- For HP Care Pack Services, visit: [www.hp.com/hps/carepack](http://www.hp.com/hps/carepack)
- For HP SAN Solution Services, visit: [www.hp.com/hps/storage](http://www.hp.com/hps/storage)
- For HP Care Pack Education Services, visit: <http://education.hp.com/carepack>
- For HP Fibre Channel switches and multi-protocol routers, visit: [www.hp.com/go/san](http://www.hp.com/go/san)
